**“NEVER  
SMASH YOUR  
TURN SIGNALS  
AGAIN WHEN YOU  
RIDE OFF-ROAD,  
TRAILS OR LAP  
TRACKS!”**

Ride well

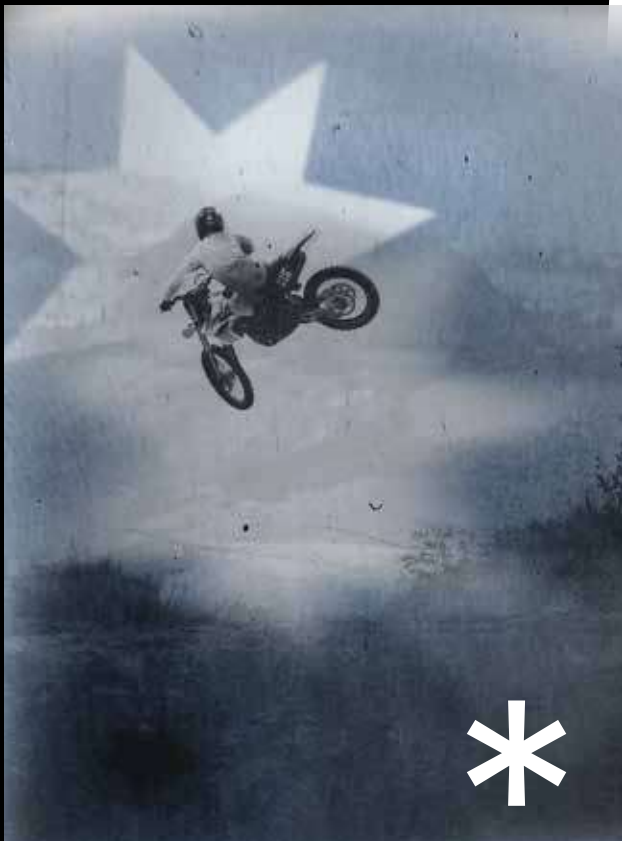

# Why?

Removable blinkers -  
the ultimate protection for turn signals.

Let's face it, we all play hard. And the toys we play on are bound to take some abuse but all too often we found ourselves spending too much time in the garage fixing blinkers instead of being out riding with our mates.

So we did something about it...

Bush-bash, verb Australian slang. 1. to clear scrubland. 2. to drive or ride through thick scrubland.

**From humble beginnings (and a great deal of frustration) an idea was born...**

CLICKnRIDE was born in the garage when we got sick of busting our turn signals when bush-bashing\* and invented removable turn signals that can be stowed away while you go off-road or lap your favorite circuit.

From those grassroot beginnings to this day, we maintain our passion and drive, continuing to explore and develop the original concept – always designing and manufacturing to the highest standard. We believe gear that performs at the highest level allows riders to embrace their adventure and enjoy the day – whether out on the trails pushing your own boundaries, or having a blast with your mates.

Ultimately it comes down to peace of mind...on and off the road for motorcyclists ready for adventure and play.

Our latest design is a testament to our dedication and the pursuit of excellence. CLICKnRIDE products incorporate the highest quality parts and materials we can find, with a design that is practical, universally stylish, has built-in strength and durability and is easy to fit.

We understand riding is a great pastime, a great sport – but it's also a way of life and we owe it to ourselves to make as much time as possible to do the things we truly live for.

QUICK RELEASE MOTORCYCLE TURN SIGNALS

DIRT ADVENTURE TRACK

# Prima

First released in 2017, CLICKnRIDE removable turn signals quickly became the rider's choice in Australia... and are still going strong.

## Prima Series Removable LED Turn Signals

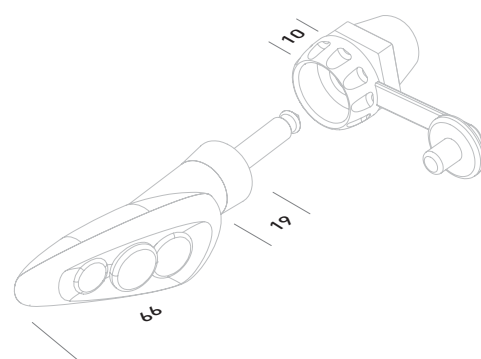

CLICKnRIDE removable turn signals revolutionised rider safety and convenience - emerging from trails with busted blinkers became a thing of the past. Our ongoing commitment to great design and function has meant we've packed in a whole lot of goodies into our turn signals, whilst enhancing the bike's appearance: a combination of sculpted, highly polished and frosted surfaces with 3D 'catseye' lenses; high output Philips SMD LEDs for a super bright, amber light; built-in mud and dirt guard and of course our legendary quick-release tech. The simple, universal mounting and quick-release system lets riders remove their turn signals in an instance - ready to take on the day.

Oh yeah, they're bright. The photo opposite was taken with no filters and no photoshop enhancements at our home base and testing grounds in the Snowy Mountains, NSW, Australia.

## **Our Dealers are the life blood of our business.**

The biggest challenge we faced in the early days was getting the word out. Once riders started to hear about CLICKnRIDE removable turn signals everything changed up a few notches. Suddenly, Dealers were very keen to get in touch as rider after rider started asking their local shop owners if they had any stock.

That's the point where we turned off our e-commerce shop and went 100% direct-to-dealer wholesale... and we've never looked back.

# Nova

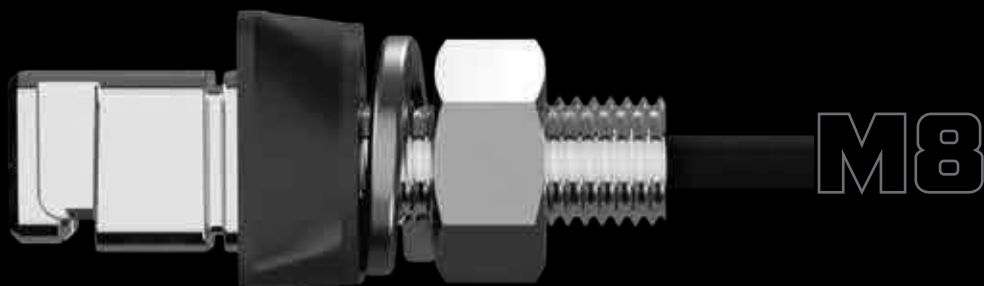

ADventure starts here with an all new series of CLICKnRIDE removable LED turn signals. Two years of research, design and development,

## Nova Series Quick-Release LED Turn Signals

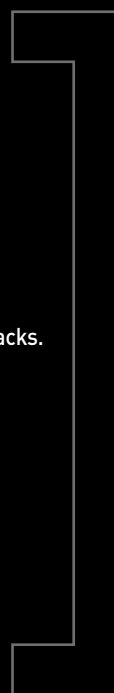

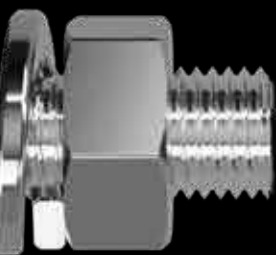

Nova Series features our patented quick release technology that provides a secure and reliable connection with haptic feedback as the light is ejected into the rider's hand, and an audible click as it locks in. Simply release the turn signal and stow it safely away to avoid any damage from swiping trees and branches or dropping your bike.

With a beautifully designed high quality metal casing, super bright custom COB LED strip, innovative 3D lens array, silicon seals and caps to keep the water and dirt out and a standard M8 thread, the new Nova Series can be easily installed on any dirt, adventure, road or track motorcycle - ready to go where riders dare!

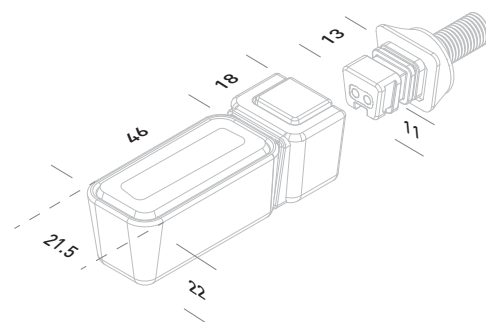

high quality materials and fine tuning has delivered the world's best turn signal... that stores away safely when you go off-road or lap tracks.
